

Other measurements

FLOWABILITY

Powder flowability is a critical property for many applications (powder movement, pelletization, fluid beds). It measures how easily powder particles can be moved without sticking phenomena. Ma.Tec. supplies different types of flowability analyzers for the reliable characterization of any type of powder.

PARTICLE SIZE DISTRIBUTION

Ma.Tec. supplies an extensive set of certified sieves according to ASTM norms. For a convenient determination of particle size distribution Ma.Tec. also supplies sieve-shakers up to 10 sieves in capacity.

AUTOMATIC SAMPLE DIVIDER

Ma.Tec. supplies equipment to automatically divide a certain amount of powder into six identical samples. It can be used for particles up to 30 mm.
